STAYING ON SCHEDULE MADE EASY

ORDER YOUR SLICE PLANNER AT EVOPAPER.COM
Since its launch, the Slice Planner has been employed by over 30,000 professionals around the world.

What people are saying

"The 12-hour radial diagram is what makes the biggest difference and what I like the most. I no longer overcommit and don’t work 14 hours a day without any real progress like I used to. This is a great planning system!"

"When it comes to paper planners and productivity apps, the supply is enormous. They all offer cool features that promise to skyrocket your productivity. But Slice Planner is different...because it works."

How it works

The core pillar of the Slice Planner approach to planning is the radial diagram that is reminiscent of an analog clock. It is to help visual thinkers, like you, to master your time and plan your activities in a more intuitive and convenient way.

The clockface diagram provides a visual display of the entire day, all at one glance, thereby empowering you to have a better perception of time and stay on track with all you set out to achieve.

Its shape of an exploded doughnut is divided into 12 sections – 12 hours. Every hour is divided into four 15-minute chunks.

How To Plan With The Slice Planner

*Indicate the time when you start your day*

Pick an hour of the day and outline one of the dotted arrows pointing to it on the inner circle of the diagram. This will be your first hour of the day

*Start planning*

Specify a date inside the diagram. Feel free to use the format that is commonly used in your country.

Create an event in three simple steps:

1. Shade the necessary section of the diagram.
2. Draw a line to the blank area of the page,
3. Name an event or write down its short description.
This simple approach to planning is going to help you:

1. Plan your day easily.
2. Make sure there are no overlapping tasks or events.
3. Allocate your time more consciously and schedule the events evenly throughout the day.

Besides traditional planning, you can also use this system to track your time.

The intuitive diagram provides a quick insight of how you use your time.

Before proceeding to the next task, take a second to shade and name the sectors to specify how the time you’ve spent to complete a previous task.

At the end of a day, week or month, you’ll be able to see how much time you’ve actually spent doing things that matter and how much time you’ve wasted on trivial stuff.

It will help you understand what tasks take too much time to execute. And it will show how you can make the most of your time.
